MaxCash

Android Project Overview

What is included

This starter project contains a simple Android demo interface with a sample balance and buttons for Send Money, Mobile Load, Pay Bills, Bank Transfer, and Transaction History.

Important limitations

This is a prototype only. It does not send, receive, store, or process real money. The displayed balance is sample data, and the buttons only show demo messages.

Project files

- Android app source code (Java)
- Android manifest and Gradle build configuration
- GitHub Actions workflow intended to build a debug APK in the cloud
- README with setup and safety notes

How to continue

1. Download the ZIP project package separately.
2. Upload the ZIP or extracted project files to your GitHub repository.
3. Run the configured cloud build workflow and download the resulting debug APK artifact.

Real payments require integration with a licensed bank or payment provider and any applicable regulatory approvals in Pakistan. Do not enter real banking credentials or financial data into this demo.
